Automatic Starting System

The Hikari Automatic Starting System

is approved as the official starting machine of the Japan Canoe Federation.

Since 2000, our starting system is has been used in most of the canoe sprint races in Japan. In 2015, our starting system was used in the Asian Canoe Sprint Championships.

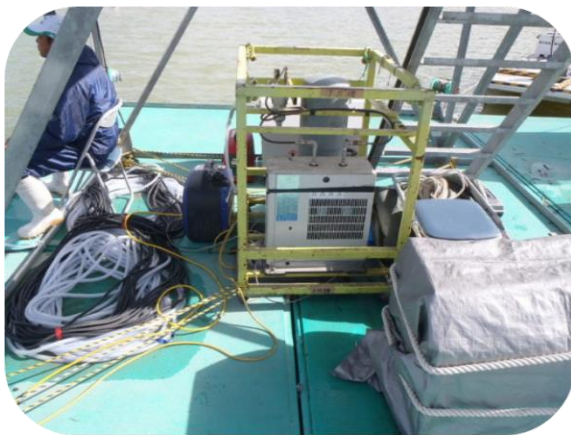

The Hikari Automatic Starting System

uses an air hose system which is anchored with buoyancy, which has no effect on the vertical wire in the water.

The system can move to the 1000m, 500m and 200m start lines at any time without the need for diving.

Our starting machine is compatible with any race course which makes it easy to adjust everywhere.

Irrespective of the strength of the wind, or the water conditions, our system will continue to operate.

Time Keeping System

The Hikari Time Keeping System is approved as the official time keeping system of the Japan Canoe Federation. The system is used in most canoe sprint races in Japan.

We can supply all equipment needed for races.

Starting System (Wireless signal)

Camera system for starting system

Photo finish system

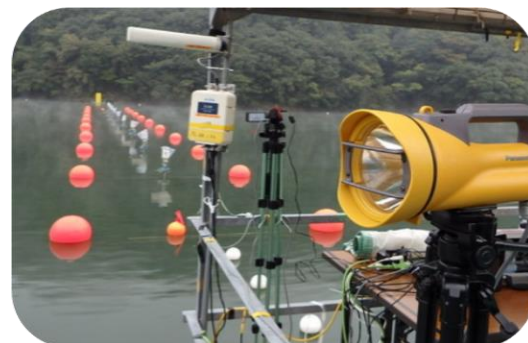

Software for competition organizing system

Multi reaction timer

Results and reports system

Live system

Lane draws and start list system

Lane Marking System

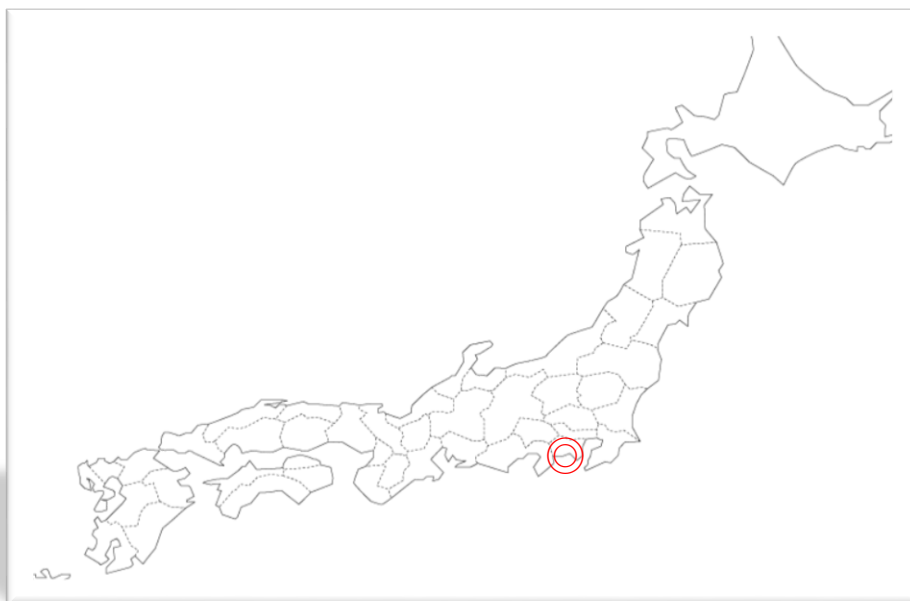

The Hikari Lane Marking

System ensures that lanes are at right angles to the start line and parallel to each other. The system is available to arrange the course for kayaking up to 1000m, and for rowing up to 2000m by our professional engineering staff.
